Art Unit: 1712

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1 to 30 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 to 6 of U.S. Patent No. 6,746,761. Although the conflicting claims are not identical, they are not patentably distinct from each other because the subsea christmas tree in '761 is included by the breadth of the hydrocarbon production equipment in instant claim 1. In addition, one having ordinary skill in the art would have found the method of claim 14 to have been obvious over the claims in '761 since this is an obvious method of making the subsea christmas tree. Note that the christmas tree in '761 includes the specific thermal insulation material and it necessarily follows that such a thermal insulation material would have to be installed on the christmas tree. This renders obvious the method in claim 14.

The Examiner also notes that claims drawn to a similar method and the subsea christmas tree in the parent application were examined together (i.e. they were not subjected to a restriction requirement). The instant claims and the claims in '761 require a thermal insulation material which comprises a silicone matrix and a plurality of non-metallic beads which are suspended directly in the matrix. Also note that instant claims 1 and 14 require the presence of a production equipment component which in use is submerged in seawater. A subsea christmas tree is such a component.

Art Unit: 1712

3. For reasons noted in the parent application, the prior art fails to teach or suggest the instantly claimed combination or method. That is the prior art is silent as to using the specific thermal insulation material in combination with the particular equipment in claim 1. Note too that claim 14 requires that the insulation material be installed on at least a portion of such production equipment component.
